## Item Description

This trio of hinged bench seats and one table were designed by Frank Lloyd Wright and completed in 1951 for the Unitarian Meeting House, which Wright also designed, at 900 University Bay Drive, Shorewood Hills, Madison, Wisconsin. The components of each of these pieces were created at Wright's Taliesin studio and then assembled at the Unitarian Meeting House by apprentices under Wright's direction. Wright was a member of this congregation and personally helped raise funds to complete the project.

These pieces were used for over thirty years at the Meeting House. The building itself is a US National Historic Landmark.

Please see the images for photographs of the pieces in their original installations, and for authenticating documentation from the Frank Lloyd Wright Memorial Foundation.

Standard Bench: 29" high, 42" wide, 21" deep Low Bench: 22" high, 42" wide, 21" deep Single Bench: 29" high, 21" wide, 21" deep

Table: 25" high, 46" wide, 40" deep

TALIESIN WEST SCOTTSDALE, ARIZONA 85258

#### TO WHOM IT MAY CONCERN:

The hinged bench seats, now being offered for private sale, were designed by Frank Lloyd Wright in 1951 for the Unitarian Church at 900 University Bay Drive, Shorewood Hills, Madison, Wisconsin.

During the final stages of construction, in the summer of 1951, Mr. Wright was on the site each day with the members of his Taliesin Fellowship who completed the construction of the building and finished the interior.

The benches were delivered to the job-site in sections, and the Fellowship members assembled them, attached the chains, preserved the wood finish, and put on the upholstery under the supervision of Frank Lloyd Wright.

Sincerely,

Bruce Brooks Pfeiffer Director of Archives

BENCH SEATING FOR THE FIRST UNITARIAN MEETING HOUSE OF MADISON, WISCONSIN

Dasign: Plywood bench seating was designed by Frank Lloyd Mright specifically for the Marting House of the First Unitarian Society of Madison. No other public building by the architect, other than the Pfeliffer Chapel at Florids Southern College in Lakeland, Florids, had such an extensive use of this type of seating. The examples from Florids have been removed and replaced by theater-type seating making those from the Westing House that much more rare and unique. Because the auditorium narrows toward the front and has raised, step-like areas at each side, custom-designed seating is essential. Four different versions of the basic bench design are required to accommodate the unusual conditions.

Construction: Component parts, sized to allow for full use of  $4^{\circ} \times 8^{\circ}$  sheets of plycood, were procut at Taliasin and assembled at the Meeting House by approxitions working under Wright's direction in 1991.

<u>Materials</u>: Although eak plywood may have been preferred as more consistent with the eak trim used throughout the building, double-faced fir plywood was used for the benches. Backs were hinged to seats at the lower, reen edge. Link chain with 5 hooks at both ends, at either side of the benches, allowed a further adjustment to the desired angle of filt.

Discosions: REGULAR BENON-seat, 21" deep x 42" wide, the sharpness of the two front corners softened by a disgonal cut. Back, 15" high x 42" wide, with 24" taper fron lower edge to top. Holghf, floor to top of seat 13", 112" risor, 1" runner, plus 3/4" thickness of plywood. Rear support, 3" wide strip bolow the seat the width of the bench. LOW BENON-same as "regular" in all dismoslor except that legs are 4" high without the riser. Holght, floor to top of seat, 5 3/4". SINSLE-seat 21" square, except for diagonal cuts at front corners. Distance between two "legs" is 10½", plus recessed supporting board that goos almost to the floor. EXTRA LOWS-seat 21" deep x 90½" wide. Back 14" high x 79 3/4" wide. Holght same as for regular and single.

<u>Cushions</u>: For each regular double bench the original design used two, singleseaf cushions, made of denim-like, aqua blue fabric. That fabric did not wear well and also faded. A later version used a single, much thinner cushion of foom rubber covered with a longer wearing, textured, equa blue fabric. The original covering included a flap of fabric over the bench seaf back which formed a pocket for books. A later back covering system accessified dfilling holes in each bench (5 in regular, 3 in single) to accommodate string fles.

Changes: As proviously noted, the cushions and back covers have been replaced. (The original fabric is still under the back covering of most original benches.) On some benches the original hinges have been replaced. Filst link chains, much less sturdy though sore decorative, were originally used. Mood runners, stached at the botton odges of most benches, were not part of the original design but were added later for ease of handling and stability.

Use: The banches have provided the primary seating for the coogregation for over thirty years, proving to be very adaptable to the multiple and varied uses of the auditorium space. Because they were never permanently installed, they have been rearranged for weddings, reversed for activities contered in the Hearth Room at the rear, used facing the side for plays, grouped with individual tables (also designed by Mright) to provide for dinner seating, and used with a multiple-table arrangement for committee or group meetings.
